

Permit-Ready MEP Design Set Created for a 4-Floor Industrial Facility

Introduction

Gsource Technologies was commissioned to prepare detailed MEP permit set drawings and associated schedules for a 4-floor, 80,000 sq. ft. industrial facility in Texas. The project required precise coordination of mechanical, electrical, and plumbing layouts in alignment with architectural and structural references while ensuring compliance with Texas-adopted codes.

Project Overview

Category: Plumbing Design

Occupancy: Industrial

Year: 2022

Location: Texas, USA

No. of Floors: 4

Area: Approx. 80,000 sq. ft.

Codes Applicable: 2015 International Building Code

Input: Architectural and Structural Drawing Set in CAD

Output: CAD and PDF

Key Challenges

- No prior MEP guidance or routing references were provided.
- Complex utility demands and fixture loads for an industrial facility.
- Mechanical and plumbing shaft coordination across four floors.
- Permit-ready deliverables required within a one-week deadline.

Approach & Solutions

CAD Input Review: Detailed assessment of architectural and structural CAD files to identify MEP routing zones.

Code Compliance Strategy: Systems developed in accordance with the 2015 International Building, Mechanical, Plumbing, and Electrical Codes.

Layout Creation: Floor-wise MEP permit sets including ductwork, piping layouts, risers, panel boards, and schedules.

Quality Assurance: Comprehensive QA review to ensure code compliance and construction readiness.

Final Outcome

Accurate and coordinated MEP permit set drawings and detailed schedules were delivered in CAD and PDF formats, ready for permit submission and construction planning.

Client Overview

The client is a Texas-based industrial infrastructure firm focused on large-scale facility development and regulatory compliance.
